

# brainbox

Brainbox is a unique platform that detects extremely subtle signs of cognitive decline years before other tools, enabling people to receive effective treatment in time to slow or prevent dementia. This is a \$70B+ market and growing rapidly. Brainbox's unique differentiator is the extraction and analysis of 300+ linguistic markers during spoken and written interactions. With recent breakthroughs in treatments, the criticality of early detection is even more urgent. Brainbox is inexpensive, easy to use, available to everyone, and effective.

Oaken is an AI speaking skills training video game that helps people build confidence and relationships. We place learners in an immersive game world where they interact with characters, role-play scenarios, and get personalized feedback grounded in learning science. By combining storytelling, gaming, and adaptive learning, Oaken makes speaking skills more engaging, affordable, and stickier than existing alternatives.

Quad is the connective layer between students, campus organizations, and businesses across the U.S. Our mission is to help students get more value from their time on campus by making it easier to discover and join the right clubs, and by expanding access to high-quality career resources, opportunities, and preparation through the organizations they already trust.

AIVA is an AI platform that helps hotels anticipate guest needs, optimize resources, and drive revenue autonomously. By integrating data across PMS, bookings, staff schedules, and guest feedback, AIVA creates a unified intelligence layer that transforms fragmented information into predictive, actionable insights. Our three core pillars are Upselling, Resource Optimization, and Guest Satisfaction. Together, they increase efficiency, elevate experiences, and improve profitability across the entire hotel operation. We are building the intelligence layer for the next generation of hospitality, where hotels don't just operate, they think.

Memenome is a suite of AI study tools that feels native to students' digital lives. Our proof of concept, Brainrot Translator, translates any context into "brainrot," slang used by those chronically online. Our main product, MemenomeLM, turns PDFs into AI-generated study videos with satisfying gameplay footage, realistic text to speech, and trending formats.
